

ALBERTO BUSNELLI

PROFESSIONAL SUMMARY

Engineering leader in monitoring, observability and data platforms. I build the systems that turn high-volume operational data into early signals: anomaly detection, forecasting and alerting across infrastructure, applications and large platforms. Hands-on background in software development, now leading the engineering behind monitoring and predictive analytics for one of Europe's largest video ecosystems.

Directing this craft toward agritech and agri-food data.

TECHNICAL SKILLS

- Designing and operating data pipelines (ETL/ELT) and distributed processing of streaming and time-series data
- Defining data models, data quality controls and KPI frameworks that support analytics and data-driven decisions
- Observability, monitoring by exception and alerting, with incident management and root cause analysis
- Anomaly detection and forecasting, including ML-based predictive frameworks
- Cloud on AWS with CI/CD, automation and containerized delivery (Docker), applying FinOps practices to keep costs under control
- Python for data processing, automation and pipeline tooling

SOFT SKILLS

- Decisive, self-driven leader, effective under pressure
- Clear, persuasive communicator with strong presentation skills
- Fast learner with a sharp, analytical and strategic mindset
- Experienced in team leadership and cross-functional collaboration
- Fluent in English, comfortable in international environments
- Strong problem-solving attitude, focused on continuous improvement

EDUCATION

Bachelor's Degree in Computer Engineering
at Politecnico di Milano

High school Diploma at Liceo Scientifico "E. Majorana" — Desio

WORK EXPERIENCE

Senior Engineering Manager | Monitoring, Data Platforms and Predictive Observability

Sky Italia | 2022 to Present

Built the department's data foundation: a structured ETL platform that centralizes operational data and powers monitoring, observability and data-driven reporting. The aim: platforms that are observable, and anomalies that can be discovered and predicted. Among the main results: implemented a predictive ML framework that anticipates issues along the video distribution chain. Put monitoring by exception in place across the publishing and distribution of on-demand content.

Streaming DevOps Manager | Delivery Optimization and Reliability

Sky Italia | 2019 to 2022

Grew from engineer to leading the Streaming Engineering team, responsible for Level-2 support of Sky's OTT platforms. Among the main results: right-sized the content delivery architecture using usage data and performance KPIs. Cut distribution costs and resources by about 20% with VBR encoding, validated through incremental A/B testing on a limited group of users. Stabilized performance to consistently meet a five-nines SLA.

Streaming Engineer | Platform Operations and QoE Analytics

Sky Italia | 2016 to 2019

Platform engineering, Level-2 support and proactive maintenance for live and VOD streaming platforms serving Italy and Germany, with QoE KPI analysis to measure and improve service quality at scale.

Software Developer | Backend and Web Applications

Piksel / Polymedia | 2008 to 2016

Backend engineering and performance optimization on Java web applications, intranets and e-commerce systems for media and sports clients.
